Invasive Species

Forester

Cost of building logging road does not make harvesting this site economically feasible

We decided to harvest ash as it will most likely be killed by emerald ash borer invasion. Larch will be planted to replace this stand

Protect Paleo sites from erosion- no harvest here

1733 Tons Carbon

3,332 Tons Carbon

865 Tons Carbon

Install Nest Boxes along Stream and leave snags and coarse woody debris after harvest

Buffer strip/ restoration planting around stream

Install woodland trail system for education, research, and recreation

Wildlife Habitat
